# The Plan

1. Intro to Image Processing
2. CCD, CMOS and Optical System
3. Intro to OpenCV
4. Fourier Transform (and Friends)
5. Image Segmentation
6. Car Lane Detection
7. Face Detection and Tracking
8. **Neural Network Introduction**
  - today (04/06) and next week (11/06)

# Advanced Face and Object Detection

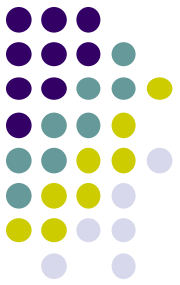

- Today and next week
  - 3 hours
- Text of the exercises/tasks
  - on the Teaching Portal
- Example images will be provided
- Goal
  - experiment with the use of two pre-trained neural networks for face and object detection

# Advanced Face and Object Detection

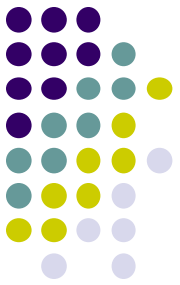

- Three exercises:
  1. Face detection through neural networks
  2. Object detection through neural networks
  3. Cars detection through neural networks

# OpenCV DNN module

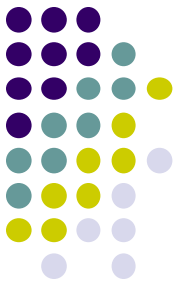

- OpenCV contains a module, called DNN, which allows you to train a neural network and request predictions
- Since training a new neural network takes a lot of time and computing power, for this lab we will only use pre-trained models.

# Face and Object Detection

We will use

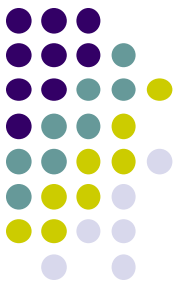

- Two pre-trained neural networks:
  - A ResNet-10:  
[https://github.com/opencv/opencv\\_3rdparty/tree/dnn\\_samples\\_face\\_detector\\_20170830](https://github.com/opencv/opencv_3rdparty/tree/dnn_samples_face_detector_20170830)
  - A MobileNet-SSD:  
<https://github.com/chuanqi305/MobileNet-SSD/>
- A Computer Vision model:
  - YOLOv8:  
<https://docs.ultralytics.com/it/models/yolov8/#key-features>

# Face and Object Detection

- Hints, insights, links, etc. are in the text of the exercises
  - I am here for you...
  - ... please ask if you need any help or clarification
